```java
public class RectangularThing extends SquareThing
{
    private int width;

    public RectangularThing()
    {
        this("",1,1);
    }

    public RectangularThing(String color, int length, int width)
    {
        super(color, length);
        setWidth(width);
    }

    public void setWidth(int width)
    {
        this.width = width;
    }

    public int getWidth()
    {
        return width;
    }

    public String toString()
    {
        return "I am a "+getColor()+" Rectangular thing with length "+getLength()
    +" and width "+getWidth();
    }

    public static void main(String[] args)
    {
        RectangularThing block = new RectangularThing("Green",10,5);
        System.out.println(block);
    }
}
```
